

Test Report for Group 4

Test Case ID	Status (Pass/Fail)	Actual Result	Test Date:	Tested by:	Notes:
TC - 01	Pass	Successfully logged into the HR admin section of the application, and was directed to the "My Account" page.	25/03/2021	Luc Jonkers	Login is really nice, comboboxes, labels and the button are not perfectly aligned.
TC - 02	Pass	Successfully showed the "user does not exist" message box.	25/03/2021	Dante George	
TC - 02	Pass	Successfully changed the password for Marvin001, a message box was displayed and then the new password was used to successfully login again.	25/03/2021	Luc Jonkers	The Change Password Form is really nice and works well.
TC - 03	Fail	Showed "User does not exist" instead of "Wrong password" as mentioned in the test case.	25/03/2021	Nguyen Tien Hung	
TC - 04	Pass	Successfully showed the appropriate message box, when I tried to change the password to the same one.	25/03/2021	Vitali Bestolkau	
TC - 05	Pass	It correctly displays a message box when the new and repeat password do not match.	25/03/2021	Luc Jonkers	However the string in the messagebox reads a little bit funny.
TC - 06	Pass	Successfully showed the "Your input is not valid" message box.	25/03/2021	Dante George	

TC - 07	Pass	As expected. Successfully added user Thomas Thompson with username of "tthompson007".	25/03/2021	Nguyen Tien Hung	When pressing the tab button on the keyboard, the tab jumps not in the order. Fix it if possible.
TC - 08	Pass	The appropriate message is shown when some fields are lacking the information or if the entered information is of the wrong type.	25/03/2021	Vitali Bestolkau	Would suggest you to clear the textboxes after the employee was successfully added to the database. Also the description of the test case was unclear and I didn't know at first how to actually test what was asked.
TC - 09	Pass	Works correctly, displays a message that the bsn already exists in the database.	25/03/2021	Luc Jonkers	However the string in the message box could be written differently.
TC - 10	Pass	Works as expected, system removes selected employee.	25/03/2021	Dante George	
TC - 11	Pass	As expected. Also showed a "Success" box which indicates the success change.	25/03/2021	Nguyen Tien Hung	

TC - 12	Fail	The system displays the users name and BSN however it does not display their contract and hours assigned.	25/03/2021	Vitali Bestolkau	This section is quite unclear and difficult to navigate. And doesn't follow the test case expected result.
TC - 13	Pass	A messagebox is displayed notifying the user that the employee was assigned to a shift, the employee is also added to the assigned listbox and removed from the available listbox.	25/03/2021	Luc Jonkers	Works quite well, it may be more user friendly to display the employees names instead of BSN.
TC - 14	Pass	Successfully removed an already assigned store worker after logging in as department manager and inputting the given date.	25/03/2021	Dante George	It's a bit odd using an employee's BSN as their ID throughout the program.
TC - 15	Pass	As expected. Successfully showed not only the available working dates but also the list of assigned employees per shift.	25/03/2021	Nguyen Tien Hung	Filter should be viewed with all 3 combo boxes or else it causes confusion because of the lack of date and shift box at the first look.

TC - 16	Pass	Successfully and accurately adds products which are easy to view in All products tab after that.	25/03/2021	Vitali Bestolkau	I really liked the way products are viewed: clear and concise. Will recommend you to use "COUNT" together with ExecuteScalar in order to get a more accurate product number. Also, one more time, I think it would be better to clean all the text boxes if the product was added successfully.
TC - 17	Pass	Correctly displays a messagebox notifying the user that they must fill in all the fields.	25/03/2021	Luc Jonkers	However the user may not know what the correct format is for each field so maybe add an example of the correct format for the user.
TC - 18	Pass	Works properly, after inputting information in the wrong field, the message box "Please full the fields with the correct format" was shown.	25/03/2021	Dante George	
TC - 19	Pass	As expected. Successfully showed the mentioned message when increased cost price to "1000" and sales price to "40".	25/03/2021	Nguyen Tien Hung	
TC - 20	Pass	Successfully removes the product list, shows the message and updates the list.	25/03/2021	Vitali Bestolkau	

TC - 21	Pass	Can successfully view product data	25/03/2021	Luc Jonkers	However the format in which the product data is displayed is very difficult to read as the user has to scroll quite far to view all the information.
TC - 22	Pass	Works as expected. Incrementing the “amount of sold products” to a preferred amount changes the total profit and total revenue of each product.	25/03/2021	Dante George	
TC - 23	Pass	As expected. Showed all required information in the data grid view.	25/03/2021	Nguyen Tien Hung	
TC - 24	Pass	Can successfully log out from the current account and move to the login screen.	25/03/2021	Vitali Bestolkau	Well done! I like the way this feature works.
